KICK-OFF OF THE DAYTON STREET UTILITY REPLACEMENT PROJECT

Beginning the week of July 18th

(Edmonds - WA) The City of Edmonds will be kicking off the Dayton Street Utility Replacement Project this month, with preliminary geotechnical exploration starting the week of Monday, July 18th. This initial phase of work will involve drilling exploratory borings along Dayton Street, between 3rd Ave S and 9th Ave S and will require temporary lane closures and no-parking zones as the drilling equipment advances along the corridor. Alternating one-way traffic will be maintained at all times during the lane closures, which are expected to last a few hours at each boring location, and on-street parking will be reopened on a rolling basis. Work is expected to wrap up by Friday, July 22nd, after which, the roadway will be fully reopened.

The Dayton Street Utility Replacement Project will make critical upgrades to the City's storm drainage, water, and sewer lines. The project stems from a recent drainage study, completed by the City of Edmonds, which determined that storm drainage pipe improvements were necessary to address drainage issues along Dayton St and throughout the North Shellabarger Subbasin. In addition, the City determined that planned upgrades of the water and sewer lines along the corridor should be completed in tandem. The initial geotechnical work is being performed by Landau Associates, and will provide necessary data for completing these utility upgrades.

Neighbors should expect construction noise and traffic impacts during the hours of 8:30 to 3:30 during this time. Questions can be directed to Mike De Lilla, project manager for the City of Edmonds, at 425-771-0220.
