2018 Slurry Seals to be Installed July 23rd 3 Streets in Edmonds will receive a Protective Seal Coat

(Edmonds - WA) On Monday, July 23, the City of Edmonds will be applying slurry seal on various streets within the City. A slurry seal coat is a quarter inch thick layer of asphalt emulsion, coarse sand and water that is applied to the existing pavement. The City's contractor will apply the seal coat to the following 3 streets in order to extend their useful life at a fraction of the cost of paving.

- 4th Ave S – Walnut St to Dayton St
- 95th Pl W & 215th St SW – 96th Ave W to 92nd Ave W
- 215th St SW – West End to 84th Ave W

To prevent damage to the new roadway surface, motorists and pedestrians will not be allowed on these streets while the seal coat is curing. This process could take anywhere from 3 to 7 hours depending on weather conditions at the time of application. Please observe and follow all warning and construction signs placed on these streets.

Citizens are encouraged to visit overlays.edmondswa.gov to find all the latest information on this program.

If you have any questions, please contact Ryan Hague at 425.771.0220 or send an email to ryan.hague@edmondswa.gov.
